

Nureva® Console

Cloud-based management of all your Nureva audio conferencing systems

Nureva Console is an included service that lets you create an account and manage and update your Nureva audio conferencing systems across multiple locations, from a single, secure dashboard.

Remote management and effortless updates

Nureva Console is cloud based so systems can be managed and monitored from anywhere. Whether IT staff are in the office or working remotely, they have everything needed to keep audio running smoothly in the organization. Nureva Console also offers automatic access to our latest features and firmware updates.

Easy enterprise scalability

Whether you have 1 or 10,000 systems, it's easy to enroll, configure and maintain all of them from a single dashboard. System information, such as model details and serial numbers, is also available. And IT managers can create an organization account and invite colleagues to join.

Free extended warranty

Enroll a Nureva audio conferencing system in Nureva Console and get an additional free third year of warranty coverage. An extra two years is also available for purchase.

Time – and work – saver for IT

Nureva Console was designed to simplify and ease the workload of IT. With the ability to see the status of all Nureva audio devices from the Nureva Console dashboard, IT can address an issue before it leads to a support call. If a call does come in, most issues can be solved from the IT team member's desk, so there's less traveling room to room. And for ongoing maintenance, IT staff can manage firmware updates and adjust settings from their desk.

Growing feature set

Looking forward, Nureva Console provides the infrastructure for deep integration between Nureva audio and other third-party solutions. New functionality will be added to Nureva Console frequently. Coming soon, IT managers will be able to integrate their room booking and room control systems with Nureva Console.

Cloud based

Access Nureva Console from anywhere

Operating system compatibility

Works with Mac® and Windows® operating systems

Device status monitoring

Know if your device is powered and connected, if it is set as the default audio device and if firmware is up to date
